

How to Plant a Wisteria Seed

These seeds are from the Wisteria in our Park.

We can't tell what color Wisteria it is due to hybridization.

Maybe it will be a color we never seen of, so please be patient and wait for it to grow.

1. Before planting

Wrap the seed in a wet tissue paper and let it sleep for 5 days in a warm room then wait 5 days for the root to sprout then plant the root.

2. Preferred germination temperature

15°C to 20°C

3. Soil for plating

Potting Compost

4. Where to place

Place at location of sufficient sunshine.

5. Watering

Please water the soil frequently for the first year. Do not dry soil.

6. How long does it take to bloom?

3 to 5 years depending on the Wisteria.
